U.S. Serial No. 09/653,406 Filed: September 1, 2001 Amendment under 37 C.F.R. § 1.116 and Request for Reconsideration under 37 C.F.R. § 1.113 Page 2 of 12

AMENDMENTS TO THE CLAIMS

- 1. (Currently amended) A biocompatible, polymerizable, macromer composition comprising a macromer bound to at least one NO carrying region or <u>at least one NO modulating compound</u>, wherein NO or <u>the NO modulating compound</u> is <u>released releasable</u> from the macromer composition following polymerization <u>in situ</u>, under physiological conditions, wherein the macromers comprises <u>regions selected from the group consisting of at least one water soluble regions</u>, <u>at least one tissue adhesive regions</u>, and <u>at least one polymerizable end group regions</u>.
- 2. (Currently amended) The macromer composition of claim 1 wherein the macromer composition comprises additional macromers which do not release NO following polymerization *in situ*.
- 3. (Original) The macromer composition of claim 1 wherein the macromer further comprises crosslinkable side groups.
- 4. (Original) The macromer composition of claim 1 wherein the macromer comprises at least one degradable region.
- 5. (Original) The macromer composition of claim 1 wherein the macromer is water soluble.
- 6. (Original) The macromer composition of claim 1 wherein the macromer adheres to tissue.
- 7. (Original) The macromer composition of claim 1 wherein the macromer comprises a water soluble region attached to a degradable region, at least one polymerizable

U.S. Serial No. 09/653,406 Filed: September 1, 2001 Amendment under 37 C.F.R. § 1.116 and Request for Reconsideration under 37 C.F.R. § 1.113 Page 3 of 12

region attached to the water soluble region, and at least one polymerizable region attached to the degradable region.

- 8. (Original) The macromer composition of claim 4 wherein the degradable region is a central core, at least two water soluble regions are attached to the core, and at least one polymerizable region is attached to each water soluble region.
- 9. (Original) The macromer composition of claim 1 wherein the macromer comprises a water soluble region forming a central core, at least two degradable regions attached to the core, and at least two polymerizable regions attached to the degradable regions.
- 10. (Previously Amended) The macromer composition of claim 1 further comprising therapeutic, prophylactic or diagnostic agents selected from the group consisting of proteins, carbohydrates, nucleic acids, organic molecules, inorganic molecules, biologically active molecules, cells, tissues, tissue aggregates, and diagnostic agents.
- 11. (Original) The macromer composition of claim 1 wherein the macromer comprises at least one water soluble region, at least one NO carrying region and at least one free radical polymerizable region.
- 12. (Original) The macromer composition of claim 11 further comprising at least one degradable region.
- 13. (Original) The macromer composition of claim 1 having incorporated therein or releasably bound thereto a compound modulating NO levels under physiological conditions.

U.S. Serial No. 09/653,406 Filed: September 1, 2001 Amendment under 37 C.F.R. § 1.116 and Request for Reconsideration under 37 C.F.R. § 1.113 Page 4 of 12

- 14. (Original) The macromer composition of claim 1 releasing NO under physiological conditions.
- 15. (Original) A method for modulating NO levels in tissue comprising administering to the tissue any of the macromer compositions of claims 1-14.
- 16. (Currently amended) The method of claim 15 further comprising first applying a polymerization initiator at the site where the macromer composition solution is to be polymerized *in situ*.
- 17. (Original) The method of claim 16 wherein the initiator binds to the tissue, further comprising removing unbound initiator prior to application of the macromer composition solution.
- 18. (Currently amended) A method for controlled release of therapeutic, prophylactic, or diagnostic agents comprising administering to tissue in need thereof a biocompatible, polymerizable, macromer composition comprising at least one NO carrying region or NO modulating compound, wherein NO or NO modulating compound is released from the macromer composition following polymerization *in situ*, under physiological conditions, wherein the macromers comprise regions selected from the group consisting of water soluble regions, tissue adhesive regions, and polymerizable end group regions and therapeutic, prophylactic or diagnostic agents selected from the group consisting of proteins, carbohydrates, nucleic acids, organic molecules, inorganic molecules, biologically active molecules, cells, tissue, tissue aggregates, and diagnostic agents.

U.S. Serial No. 09/653,406 Filed: September 1, 2001 Amendment under 37 C.F.R. § 1.116 and Request for Reconsideration under 37 C.F.R. § 1.113 Page 5 of 12

19. (Currently amended) A method for making a polymeric composition capable of releasing nitric oxide at physiological pH, the method comprising

polymerizing in situ a solution of biocompatible macromers on tissue,

wherein the macromers comprise at least one NO carrying or producing region.

- 20. (Currently amended) A method of treating a disorder or condition with NO comprising administering to an individual in need thereof a biocompatible, polymerizable, macromer composition comprising at least one NO carrying region or NO modulating compound, wherein the NO or NO modulating compound is released from the macromer composition following polymerization *in situ*, under physiological conditions, wherein the macromers comprise regions selected from the group consisting of water soluble regions, tissue adhesive regions, and polymerizable end group regions.
- 21. (Original) The method of claim 20 wherein the macromer further comprises degradable regions.
- 22. (Original) The method of claim 20 for treatment of a disorder or condition selected from the group consisting of wound healing, restenosis, thrombosis, asthma, arthritis, and erectile dysfunction.
- 23. (Previously amended) The method of claim 20 wherein the macromer is adhered to tissue to prevent surgical adhesions, adhere tissue, provide support for tissue or coat the tissue.

U.S. Serial No. 09/653,406 Filed: September 1, 2001 Amendment under 37 C.F.R. § 1.116 and Request for Reconsideration under 37 C.F.R. § 1.113 Page 6 of 12

- 24. (New) The method of claim 22 wherein restenosis occurs after stint deployment.
- 25. (New) The macromer composition of claim 1 wherein the macromer comprises at least one selected from the group consisting of PVA-oligoglycolylacrylates and PEG-oligoglycolylacrylates.
- 26. (New) The macromer composition of claim 1 wherein the macromer is an acryloyl-PEG-CYS-NO macromer.

GI

- 27. (New) The macromer composition of claim 1 wherein the macromer is an acroyloyl-PEG-Lys₅-NO macromer.
- 28. (New) The macromer composition of claim 1 wherein the macromer is an acryloyl-PET-DETA-NO macromer.
- 29. (New) The macromer composition of claim 1 wherein the macromer is a PVA-NH₂-NO macromer.
- 30. (New) The macromer composition of claim 1 wherein the macromer is a PVA-Cys-NO macromer.
- 31. (New) The macromer composition of claim 1 wherein the macromer is a PVA-NO-bfGF macromer.
